Sermepa approve the Argon-STS payment solution

2i Informatica industrial and its unattended payment solution has passed the Sermepa test and has been validated to work with Sermepa's TPV-PC for EMV payment.

Since over 20 years 2i Informática industrial has been developing and designing with success unattended terminals specialized in gas stations. Now with EMV more security has arrived to credit card transactions, 2i Informatica industrial achieves a certification of its new terminal Argon-STS, who has PCI and EMV certifications. The terminal with a designed and developed by us allows to do transactions directly to sermepa. The Argon-STS payment system, based in the TPV-PC give to the customer a complete solution for the services payment, without third companies involved. this system connects directly to Sermepa servers to validate transactions, and is done online through a internet connection. This new system is available for new facilities with the Argon-STS terminal, but also it's available an upgrade to become an old installation into a new emv capable payment system. To get more information, don't heasitate to contact us and we can advise you to integrate this system into yours. We will be pleased to answer all your doubts
